Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of ten two-story, two-bay wide vernacular Queen Anne-style brick houses with shed roofs and sheet metal and stepped brick cornices were built c. 1895. They are typical of a form of house built particularly in southwest Baltimore that is only two rooms deep, but sits on a high basement, where the kitchen is located. Some of the houses retain their original brick facades, which were originally painted; others have been covered with formstone. After the use of wood was outlawed for cornices in 1892, sheet metal and stepped-back bricks became the predominant materials used. This decorative brickwork represents a vernacular translation of high-style Queen Anne designs first seen in Baltimore rowhouses c. 1880.

The houses are two stories in height, two rooms deep and there is no back building. The houses are constructed in common bond and were always painted. Each house has a single hooded chimney located at the rear of the house. The shed roof is capped by a sheet metal crown molding set above a frieze created by four rows of progressively recessed stretchers framed by four rows of slightly projecting, yet progressively recessed headers.

The tall, narrow door and window openings have segmentally arched brick lintels, with plain tympanums. The sills are brick. Most openings have their original 1/1 sash. Doorways had double-light transoms, only a few of which survive. Several original doors, with five horizontal panels survive as well. The houses sit on high basements lit by a double-light sash. Each front door is reached by five or six concrete or metal steps, set parallel to the street

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses significant as representing the level of architectural stylishness builders were willing to give to small street houses in the late nineteenth century and is testament to the fact that their was no stigma attached to small street living. They represent a form of house particular to southwest Baltimore—only two rooms deep with the kitchen located in the basement—a design that allowed builders to build on much shorter lots. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period c. 1870 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast and southwest of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide three-bay-wide, two-story houses on the main streets, and smaller, 11' to 13'-wide two-bay-wide, two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 - \$1,500; small street houses for \$700 - \$900.

Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because of their proximity to the slaughterhouses of southwest Baltimore and their related industries, particularly the William Wilkens & Co. Curled Hair Manufactory, one of the largest employers in the area. A number of German-American owned breweries were also located in this section of the city. Moderately-priced housing was built to provide homes for the mainly German immigrants who came to southwest Baltimore to work in these rapidly expanding industries in the decades after the Civil War.
